Environmental Commitment Statement

Due to the environmental commitment assumed by AZTI and the ISO 14001 environmental management system that has been implemented at our work centres, the activity carried out by your company, as a supplier of our goods or services, must respect and comply with our environmental requirements, so as not to jeopardise the commitment to pollution prevention, compliance with current environmental regulations, and continuous improvement that we have acquired.

Below are the environmental commitments and requirements that you must subscribe to as an AZTI supplier, depending on your company's activity, so that if you are in agreement, you can send it to us signed:

- Respect AZTI's environmental policy, which is available on our website (www.azti.es).
- Carry out the activities for which they have been contracted in an environmentally friendly manner, minimising possible environmental impact as much as possible.
- Have the regulatory authorisations required to carry out your activities.
- Know and comply with the environmental regulations established at AZTI's work centres when applicable.
- Correctly manage the waste generated by your activity in accordance with current regulations.
- Inform AZTI of any significant environmental impact or emergency that results or may result from your activity.
- Consult AZTI about any doubts that may arise from our policy or your commitment to it.

Moreover, if your company has an ISO 14001 or other environmental management certificate, please send us a copy of it.

We accept the requirements mentioned in this document.

Company name: _____

Responsible person: _____

Date: _____
